

Volume 380 June 9, 2011

Market Natural gas traded higher this week supported by hot summer temperatures across the country causing more gas to be used for electric generation. Gas production levels due mostly to on-shore shale drilling are causing an over-supply condition; gas is also being exported as LNG. Industrial demand is recovering slowly. Natural gas is attractive to fix at this time to protect this year and beyond. The North American rig count is 887 this week. After a rise in count starting a year and a half ago the rig count has leveled off but increased 6 this week.

The Crude oil price for July is higher this week at \$101.44 per barrel. Heating oil is higher at \$3.09 per gal. Unleaded gasoline futures are higher this week at \$2.99 and gasoline at the pump is around \$3.99...in Indiana. The natural gas storage report today was an injection of 80 BCF. Storage is 255 BCF lower than last year and 58 BCF lower than the 5 year average.
